EDUCATION

Bachelor of Applied Science — Cyber/Computer Forensics & Counterterrorism *July 2024 – June 2028*
Ganpat University, Ahmedabad, Gujarat, India

Relevant coursework: Web Application Development, Data Structures & Algorithms, Database Management Systems, Operating Systems (Linux/Unix), Computer Networks, Software Engineering.

TECHNICAL SKILLS

Frontend	TypeScript, React.js, JavaScript (ES2022+), HTML5, CSS3, Responsive Web Design
Backend	Python, Node.js, RESTful APIs, MongoDB
Cloud & DevOps	AWS (EC2, S3, Lambda), CI/CD (GitHub Actions), Linux/Unix environments
Testing	Unit testing (Jest), Integration testing, End-to-end testing
Tools	Git, GitHub, Figma, VS Code, Bash
Concepts	State management, Data fetching, Form validation, Full stack development

PROJECTS

Full Stack Task Management Web Application *2024*
Personal Project — github.com/dhrumilpatel (add link)

- Built a responsive full stack web application using **React** with **TypeScript** and **Node.js** backend, implementing state management with React Context API and efficient data fetching with custom hooks.
- Developed reusable form components with robust client-side and server-side **form validation**, reducing user input errors by enforcing schema constraints.
- Connected the frontend to a **MongoDB** database via a RESTful API, handling asynchronous data fetching and loading/error states gracefully.
- Deployed the application to **AWS (EC2 + S3)** with a **CI/CD pipeline** using GitHub Actions for automated testing and deployment.
- Wrote **unit and integration tests** using Jest, achieving high coverage for critical business logic and API endpoints.

Portfolio Website with Responsive Web Design *2024*
Personal Project

- Designed and implemented a mobile-first, fully **responsive web design** using HTML5, CSS3, and vanilla **JavaScript**, ensuring cross-browser compatibility and accessibility.
- Prototyped UI layouts using **Figma** before implementation, reducing design iteration time and improving component consistency.
- Hosted the static site on **AWS S3** with CloudFront distribution, achieving fast load times globally.

Python Data Scraper & Visualisation Tool *2024*
Academic Project

- Developed a **Python** command-line tool to scrape, process, and visualise publicly available datasets, applying clean code principles and modular design.
- Operated the toolchain entirely within a **Linux/Unix** environment, using shell scripting to automate data pipeline steps.
- Stored processed records in **MongoDB** and exposed results via a minimal RESTful API built with

Flask.

OPEN SOURCE & COMMUNITY

- Actively interested in **open source** software development and tech community activities; regularly contributing to and studying public repositories on GitHub to strengthen engineering fundamentals.
- Member of university coding community, participating in peer code reviews and collaborative full stack web application development workshops.

ADDITIONAL INFORMATION

Languages	English (Fluent), Hindi (Native), Gujarati (Native)
Career Goal	Seeking a career in software engineering; open to opportunities in Japan
Availability	Available for full-time internship; no academic schedule conflicts (10:00–19:00 JST)
